CLAIBORNE GROVE

Proforma Details

Harvard University | Team 150167

Student Team:

Eddie Coates, Harvard Business School, Master in Business Administration, 2016 Zach Lee, Harvard Graduate School of Design, Master in Design Studies, 2016 Alex Medina, Harvard Graduate School of Design, Master in Urban Design, 2015 Roma Patel, Harvard Graduate School of Design, Master in Design Studies, 2016 Eli Sokol, Harvard Graduate School of Design, Master in Design Studies, 2016

Faculty Advisors:

Bing Wang, Harvard Graduate School of Design, Associate Professor of Real Estate and the Built Environment Richard Peiser, Harvard Graduate School of Design, Professor of Real Estate Development

CLAIBORNE GROVE

DESIGN AND DEVELOPMENT PLAN

"Everyone who knows America's Most Unique City understands the character that lives in the soul of our people, the creativity that rises from our neutral grounds and the essence that drips from our moss draped oaks to form a canopy of heaven. Now is the time to form a united front. Together, we will rebuild New Orleans."

- Bring New Orleans Back website

Inspired by the architectural and cultural heritage of the project site and its adjacency to major city destinations and amenities, **Claiborne Grove** recalls the rich landscape that once characterized North Claiborne Avenue and prioritizes redevelopment of the street most critical to the growth and transformation of the neighborhood. The proposal's central design element is "the Grove," a linear multi-purpose park and urban landscape sited below elevated Interstate 10. Uniting the Grove is a vast canopy lattice structure wrapping underneath I-10 and extending along the elevated highway in rhythmic form. Built of locally salvaged wood, the canopy captures the armature, materiality, and whimsy of New Orleans' famed oak trees, its bold form drawing residents and visitors alike to a one-of-a-kind urban park space.

Not just a showy display of architectural prowess, the canopy channels storm water runoff from I-10 through a system of retention ponds, planters, and underground catchment basins contained within the landscape of the Grove. Recognizing North Claiborne Avenue's role as a primary connection between the new University Medical Center on Canal Street and the soon to be completed Lafitte Greenway, the street is designed to maximize pedestrian and cyclist appeal without sacrificing vehicular accessibility. The modestly realigned N. Claiborne Ave takes a more sinuous form to encourage slower driving and provide adjacent residences and retail with more generous setbacks from the interstate. At Canal Street and St. Louis Street, the two termini of the Grove, the park space opens up to create maximum visibility and invite residents and visitors alike to enter and explore. The canopy, extending beyond the structure of I-10, beckons drivers above to investigate the buzz of activity below.

The northern terminus of the canopy park is anchored by Claiborne Community Center, which serves as a hub for healthy living along the Lafitte Greenway while functioning as a shared indoor space for the Faubourg Lafitte, Iberville, and Tulane-Graver neighborhoods. Both amenities will catalyze diverse programming within the Grove while driving pedestrian traffic toward locally-owned stores and restaurants.

The pastel colors and long, linear forms of the site's new residences pay homage to New Orleans' classic shotgun homes, thus preserving and reimagining the historic urban fabric for contemporary needs. Apartment development is concentrated near the Medical Center and along North Claiborne Avenue to cater to medical professionals and young creatives. For-sale condos, duplexes and townhomes front the Lafitte Greenway, which offers protected park views and quick access to the interstate. Mixed-use commercial and biomedical office space, supported by the economic engine across the street, line the intersection of Canal Street and North Claiborne Avenue, bringing new employment opportunities to area residents.

In sum, Claiborne Grove addresses the needs and desires of the broader North Claiborne community – a development that protects the authenticity of New Orleans culture, supports locally-owned businesses, and provides diverse and inclusive housing options.

FINANCIAL PLAN

Claiborne Grove's mix of uses and strategic phasing will mitigate investment risk for the project while creating opportunities to adjust the product offering in the event that there are material changes in the economy. Over a 10-year period, the project is expected to generate an 8.4% unleveraged IRR and a 21.0% leveraged IRR, assuming conventional debt financing and public subsidies generated by a new Tax Increment Financing (TIF) district. In total, the project will cost approximately \$360 million to develop, with 14% of that amount dedicated to public improvements including construction of "the Grove" urban park beneath I-10, improved streetscapes in adjacent neighborhoods, and the acquisition of sites for the proposed Museum of Gulf Ecology and Claiborne Community Center.

Comprising almost 33 acres, the development plan includes parcels currently owned by NCNIA (D, E, F, and G), blocks A, B, C, H, I, and J, and a strategic block identified as "M". The land will be assembled through a combination of direct purchases for Phase I and options for Phases II and III, totaling \$35.5 million. This value includes valuations for blocks already purchased by NCNIA. This valuation was derived through the use of discounted cash flows, average cap rates for each property type, and market comparisons. Owner-occupied homes in "good" condition that contribute to the unique and historic nature of the neighborhood will be retained.

PHASE I: Capturing Existing Momentum

Following initial land acquisitions, the first phase establishes the Grove and capitalizes on existing momentum created by the University Medical Center via the construction of mixed-use properties along Canal Street that contain efficiency apartments, furnished short-term rentals for medical professionals, and small business suites with ground floor retail. A Rouses grocery on block B will anchor the initial phase, providing residents with access to a familiar local brand and healthy food while driving traffic to surrounding retailers. This mixed-use phase will feature loft-style apartments built over "artist bays," 400 sf affordable short term gallery and retail space to incubate local entrepreneurs and activate the Grove.

PHASE II: Creating a Destination

After residential development expands along Claiborne Avenue, Phase II continues the project's development towards St. Louis Ave to complete the connection to the Lafitte Greenway. During this phase, additional rental units will be constructed near the park in parcel H and the current RV Park will be relocated to a newly-constructed terrace structure on parcel J. Both will benefit from the retail and cultural amenities built in Phase I. This phase also includes a 50-bed senior living facility with independent, assisted, and memory care along the St. Louis Ave corridor.

PHASE III: Connecting to the Quarter

Higher density elements, including 183 for-sale residences along the Lafitte Greenway and a mid-rise tower on Canal Street containing biomedical office space and a 100-room hotel, will be completed in Phase III. This final phase will benefit from the Grove's momentum and neighborhood energy as well as the commercial strength of Canal Street, finalizing the connection to the French Quarter and Central Business District.

Public Financing

Public subsidies for the project will be accessed in two ways. The newly-created North Claiborne TIF District, which encompasses only parcels acquired by the developer, will contribute approximately \$44.5 million towards the development of the Grove and adjoining public infrastructure in Phase I. Over the course of its 30-year life, the District will capture almost \$150 million in incremental revenue, \$65 million of which will accrue to a rolling TIF fund that the city can utilize for future projects. The 278 units of affordable and workforce apartments, representing 45% of all rental units, are financed by two phases of Low Income Housing Tax Credits (LIHTC) totaling \$19.7 million. Over the investment period, the conventional construction loan, sized at 60% of project costs, will be paid down through proceeds from for-sale residences and a long-term permanent loan that will be put in place after the project rental stream stabilizes.

(includes \$5.0mm payment to RV Owner)

(2) Purchased beyond the scope of the project brief

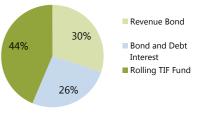

Tax Increment Financing Detail

Overview

In order to fund the creation of "The Grove" public park beneath I-10, the project will make use of a 30 year TIF district. The district will only include property acquired and developed as part of the Claiborne Grove plan. Park construction will be funded through the issuance of a \$45mm municipal revenue bond secured and supported by the TIF's incremental revenues and a \$20mm line of credit from the developer. The line of credit will be partially drawn to fund the initial shortfall between incremental revenues and bond debt service. At the end of year 10, the balance on the line of credit will be paid down through a \$11mm twenty-year term loan at 4.5%. At this point, incremental revenues will provide a debt coverage ratio of 1.47x. At TIF expiration in year 30, \$65mm will have accrued to a new rolling TIF fund for future city use.

| Assumptions | |
|-------------------------------------|-----------------|
| Allocation to Public Infrastructure | \$44,508,000 |
| Total Incremental Capture | \$149,644,075 |
| TIF District Size (in acres) | 29.28 |
| Term | 30.00 |
| Initial Ad Valorem Base (2015) | \$300,060 |

(1) Property is located in Census Tract 49 - Orleans Parish

The development area is located in a qualified census tract and thus would be eligible for a basis boost for the LIHTC calculation.

(2) LIHTC Funding will occur over two phases, one for each half of the multifamily project
